1. Claims 11-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 6 jan 05.

2. Claims 5 and 6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Paragraphs 00011 and 00027 state that the cutting edge surfaces that form a cutting edge are *asymmetrical*. Paragraphs 00012 and again 00027 state that the cutting edge surfaces on a single plate are axially *symmetrical*. The drawings seem to show asymmetry. Given the confusing and contradictory language, it would not be clear how to make the device.

3. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not understood how to interpret Applicant's claims for symmetrical cutting edge surfaces (see above rejection). In claim 5, the term "the respective cutting edge" lacks proper antecedent basis.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1 and 3-8, as best understood, are rejected under 35 U.S.C. 102(e) as being anticipated by Jakobi '691, who shows in figure 3 a series of symmetric cutting edges formed by asymmetric cutting edge surfaces.

6. Claims 1-3 and 7-10, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Zysset '747, who shows in figures 2 and 3 a series of interconnected plates having symmetric cutting edges and plates (at least for the middle two) and having different "types" of plates (a short one at the end and a long one in the middle).

7. Made of record but not relied on are patents to Wahlstrom and Aycock showing pertinent zigzag cutters that read on some of the claims.
